---

The research activity was essentially oriented towards liver diseases, with particular regard to those related

to hepatitis virus infection, metabolic dysfunction-associated fatty liver disease, liver cirrhosis and its complications including hepatocellular carcinoma. The published works were the products of "translational" or more purely clinical studies. The results of the studies have been published in high-profile journals including the New England Journal of Medicine, Lancet, Journal of Hepatology, Hepatology, American Journal of Gastroenterology etc.
